Julie, I created a folder labeled "Ashue" on E & E's FTP site. Links and log-in information is listed below.

Thanks,
Steve

We would need an FTP site as the document is huge! We also may be able to burn a CD, but I have a new laptop and haven't tried that yet. Also, note the date on the report I have is January 2013 – so it must be some sort of update to the original? I didn't see anything about soil removal.

Let me know what would work best.

J.

I've seen the "Hazardous Building Materials Inspection Report" by Fulcrum, dated October 18, 2011. I have also seen copies of waste records. I haven't seen the abatement report, though, and I would like to if it is available.

One particular question I had after reviewing the waste records was the "asbestos soil" that was listed on several of them. Julie, did you see anything about soil removal in the abatement report?

Julie, would you be able to send a copy of the report? If E & E can help facilitate it, let us know. I can send a link to an FTP site, or we can arrange for someone in our Seattle office to copy the CD, or whatever would be helpful.

Thanks,
Steve

I quickly scanned through the CD this morning and found a few interesting things in Fulcrum's Hazardous Building Material Abatement Summary Report (426 pages).

1. Asbestos waste apparently was shipped to Terrace Heights Landfill in Yakima – a local landfill that can accept asbestos-containing wastes.
2. The air samples analyzed by TEM had both chrysotile and amosite asbestos detected; however, none of the bulk materials tested were found to contain amosite. Also, although vermiculite was reported in many samples, no amphiboles associated with Libby were identified in these materials. This is a little suspicious.
3. Page 231 of the report indicated that pre-abatement samples exceeded the PEL (0.117 f/cc).

These are just a few of my notes. The report mostly dealt with waste management and site activities during the demolition. The pictures on the CD show how waste was sorted prior to disposal. It looks like a reasonable operation. Steve Hall may want to review the CD.
